

AVMASTER

ABANDONED VEHICLE MANAGEMENT SOFTWARE

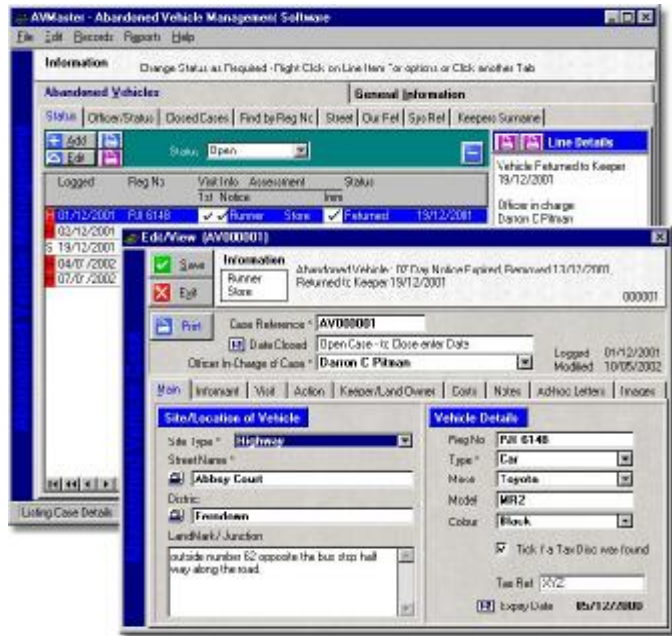

AVMaster is for use by Local Authorities who wish to **effectively** and **efficiently** deal with the increase in administration workload brought about by increasing numbers of abandoned vehicles seen over recent years.

Why are users so impressed with AVMaster?

- Easy to Use with Minimal Training
- Manages Administration Workload with Ease
- Automatic Status Tracking of Vehicles
- **Reduces time spent administrating cases**

Why do users choose AVMaster?

- In-Built wizard cross-checks the database during case creation
- Standard Forms and Letters are easily set up for ANY type of situation
- In-Built Visit Forms and Contractor Request Sheets
- Directly Email Vehicle Removal Form
- New Notices/Letters can be set up in-house and existing ones edited using the **Built-In Developer**

Why you should choose AVMaster NOW!

- To maximise your Management of Abandoned Vehicles
- To Maximise Personal Efficiency
- To take the Stress created by Administration Overload out of your Work Environment
- **Because our price is a STEAL – from £950**

Fully networked - no additional cost per user

Availability - Immediate - with NO lead time - the download is fully working.

Case Summary

Information Sheet

Options for all our reports include runtime filters

This particular report also allows you to select what information you want printed

These are ONLY a few of the reports available ready-to-run on the system, you can also print Notices/Letters and add your own and/or modify existing formats!

Main Features

AVMaster is user friendly - designed from the ground-up with the user in mind AVMaster follows standard windows behaviour reducing training requirements, where appropriate *Wizards and Shortcuts* have been included. Brief help messages automatically pop-up as the mouse moves over the screen, full context sensitive help is always available at the press of a button. As for the capabilities of AVMaster - don't be misled by it's ease of use - IT'S ALL THERE just see for yourself! Being fully compiled, AVMaster flies along at *light speed*!

Add Wizard - Our in-built wizard is used during the creation of a new case. As Vehicle Registration Number and Street Name are entered the **wizard automatically cross-references the database to see if the vehicle is already on file**. If found or listed the user may elect to exit the wizard and open the found case or continue. Carrying out both operations at the same time immediately reduces administration time!

Browse Screen - Allows you to **view cases by Status** (open, late, or closed) for all cases or for a specified Officer. Further options allow you to find records by Street, Vehicle Registration Number, User Reference, System Reference or Registered Keepers Name. Each listed case displays current vehicle status, whether the vehicle has been visited, if visited the vehicle condition and required action, whether action is required immediately and current locale/stage. Further information for the highlighted case is also displayed including vehicle information, informant information, Street Name, local landmark/junction details and more..... This single screen allows you to **visually monitor all cases on file including their current stage** (automatically calculated by the system).

Records - Against each case the current status and pertinent information concerning the case is automatically displayed at the top of the record. Any number of individual case notes and up to 99 digital images may be stored against each case. Various actions taken and letters printed are automatically logged for reference. **VQ4** forms can be printed or created for Electronic File Transfer. The system also has built-in capability to import returned **VQ7** files containing Registered Keeper Details.

Other Information

All Letters/Notices used in the system may be edited/copied and new letters added using a *built in Letter Manager/Developer*. This is a very powerful *mail-merge* system, that allows for a level of complexity not possible in most leading word processors. Fields from multiple files may be simply dragged and dropped into position or inserted into formatted text, conditional fields can be set-up... *over 90 in-built functions* are provided - It's even possible to add/print bar codes!

In-built ready to run reports print full case details and provide summary listings and *management analysis/summaries including 3d Bar Charts*.
